**Lived and worked in Dubai, UAE (2021-2022) as an independent entrepreneur. Open to relocation: UAE, Qatar, Saudi Arabia, Germany, Netherlands, Canada, USA. Also open to remote.**

## PROFILE

I build AI agents and automation that run real business work: customer chat, trading research, and content production. I write Python and TypeScript and work with AI coding agents (Claude Code) as my main development tool, which lets me ship and test systems quickly. My systems are built to fail safely. Rules run before any model call, anything that moves money goes through one checked state machine, and every external service sits behind a mock so the full test suite runs without API keys. I also bring eight years of marketing and business development, which I still do, so I understand the commercial side of what I build.

## SELECTED PROJECTS

**QUANTSAMA: multi-agent crypto trading research terminal** 2026

- Position sizing driven by walk-forward GARCH(1,1) volatility forecasts, with regime-based multipliers and a hard exposure ceiling.
- Added an agent layer: proposal agents, a debate stage, a risk guardian, and a backtester. On mainnet the guardian may only propose reduce-only exits; new entries stay blocked in code.
- The approval queue rejects any trade approval unless a human has armed the desk from the dashboard. Agents never hold the arming credential.
- A scheduled cloud coding agent builds each phase as a pull request. I ran an AI security-review pass on each merged PR, decided merge-after-fixes, and had the fixes applied and re-tested before merging. Phases 2 to 5 are merged; the Telegram notifier and dashboard PRs are in review. 913 automated tests pass on the agents branch.

Python, FastAPI, arch (GARCH), ccxt, Hyperliquid, React, TypeScript, Vite, Tailwind, Supabase, pytest, GitHub

**WhatsApp AI Sales Agent (product for small businesses)** 2026

- An assistant on a business's WhatsApp line that answers customers at any hour, knows the catalogue and prices, qualifies leads, sends payment links, and hands over to a human.
- One configuration file per client (*business.yaml*), designed for one container per client. Webhook signatures are verified: tampered requests get 401.
- 35 of 35 tests pass with zero credentials. It runs end to end on mocks; the next step is Meta Business Verification and live keys.

TypeScript, Node.js, Fastify, Claude API, WhatsApp Cloud API, Paystack, Zod

**Automated daily YouTube Shorts pipeline** 2026

- A scheduled job wakes the Mac at 06:00, pulls news from RSS, and has an AI agent write the episode and generate the voice-over.
- Renders the video with Remotion, runs an AI review pass with an optional second render, emails the result for approval, and uploads it as a private draft through the YouTube Data API.
- Includes a lock with stale-lock recovery and a health probe for the scheduler and agent login.

Python, Bash, macOS launchd, Claude Code CLI, Remotion, Kokoro TTS, YouTube Data API v3, OAuth 2.0

**NaijaNexus: artisan marketplace with escrow** 2026

- Marketplace connecting Nigerian craftspeople with buyers. Sellers upload photos and Claude Vision drafts the listing.
- Escrow orders move through one state machine; every illegal transition is rejected at a single point. Payments, AI and storage sit behind mockable adapters.

TypeScript, Express, React, Prisma, PostgreSQL, Claude Vision API, Paystack, Docker, Kubernetes, Vitest

**Multi-agent development setup** 2026

- Set up eight specialised AI agent roles with tool-enforced limits (read-only reviewers cannot write), model routing by task cost, and git worktrees for parallel work.
- Work moves through Discovery, Plan, Approval, Execution and Verification, and a separate agent tries to disprove finished work before it is accepted.

## EXPERIENCE

**Independent AI Automation Engineer and Founder** 2026 - present
*Self-employed, Abuja (remote)*

- Design and build the projects above, from first plan to tested system. Worked as an AI growth and automation strategist from 2023.
- Founded PhoenixBot (AI trading platform, phoenixbot.io) and B-BenzHodling E-Payment (crypto payments for African users).

**Head of Marketing, PerfectRide** Jan 2025 - present
*Hybrid, Canada and Nigeria (perfectride.io, vehicle business investment platform)*

- Lead marketing for the platform, including a 47-second vertical promo video with an AI host for the STAKE product.

**Sales and Marketing Manager, Cladex** Feb 2026 - present
*Part-time, Nigeria (multichain crypto platform)*

- Marketing strategy and sales for a multichain crypto platform.

**Marketing Manager, NiMEDix Ecosystems Technologies Ltd** Jan 2018 - present
*Abuja, Nigeria (hybrid)*

- Marketing strategy and blockchain analysis for a health-technology and blockchain company.

## EDUCATION

Ordinary National Diploma (OND), Mass Communication, Federal Polytechnic Bida, Nigeria

## CERTIFICATIONS

AI Fluency: Framework and Foundations, Anthropic (July 2026)
Claude Code 101, Anthropic (July 2026)

## SKILLS

**Languages:** Python, TypeScript, JavaScript, SQL, Bash

**AI and LLM:** Claude API, tool use and function calling, multi-agent systems, prompt engineering, AI coding agents (Claude Code), LLM evaluation, speech-to-text (whisper.cpp), text-to-speech

**Backend:** FastAPI, Fastify, Express, Prisma, PostgreSQL, SQLite, Supabase, REST, webhooks, WebSockets

**Frontend:** React, Vite, Tailwind CSS, Remotion

**DevOps:** Docker, Kubernetes, GitHub, launchd scheduling, Netlify, Render, pytest, Vitest

**Integrations:** WhatsApp Cloud API, Paystack, YouTube Data API, ccxt, Solana and EVM chains

**Quantitative:** GARCH volatility models, walk-forward validation, backtesting, Brier-score calibration

**Languages spoken:** English (full professional)
